

Other Uses for Our Innovative Target:

By Purchasing 1x2 furring strips and cutting them down to 4'-0" Lengths, you can transform a standard "BC" or "Classic" silhouette into a stand that also holds full size competition silhouette targets. You can then shoot cardboard with the steel behind, or simply remove the steel target and shoot just the cardboard or paper if you would like. See picture below:

Full size cardboard targets are NOT included with our targets. You can find them readily and easily at any fine firearms supply and shooting sports retailer, and they are very inexpensive. Simply order a pack of targets, and then place 1x2 furring strips into the front tubes of our base, then staple the target to the furring strips. This allows you to maintain a score able target AND have the ring of the steel behind!

Basic Target Guidelines:

-1/4" Targets are rated for handgun use only! Do not use rifles on pistol targets. Rifles WILL damage the 1/4" plate immediately! When using pistols you must be AT LEAST 10 yards from the target! **If you are using magnum handgun calibers, it is recommended to use only on 3/8" AR500 targets and it is recommended to increase the range to 20 yards.

-3/8" Targets are rated from pistol use up to standard centerfire rifles. 3/8" Plate may be used for pistols, but CAREFUL inspection must occur after rifle use. Do NOT use penetrator or steel core ammunition on steel targets! They WILL ding, puck, dent, or chip the target face, making it unsafe for close range pistol shooting. You MUST be at least 100 MINIMUM yards away from target when using centerfire rifles. If you intend to use magnum calibers like .300 win mag please increase distance to 200 yards. ***Note: velocities above 3000fps will put slight markings on AR500 steel***

-The A-DAP system is designed to last. The target moves when struck which decreases the energy of the bullet absorbed by the plate, thus extending the life of the plate.

-ALWAYS WEAR APPROVED EYE AND EAR PROTECTION WHENEVER ENJOYING SHOOTING SPORTS!

-Please read our separate safe shooting pamphlet included with this packaging. It outlines basic range safety and safe shooting practices. Please consult with trained professionals BEFORE partaking in ANY range shooting!

INSTRUCTIONS

SAFELY USING YOUR STEEL
TARGET SYSTEM

ADAPTIVE TARGET SYSTEM (A-DAP)

Congratulations and thank you for your purchase of one of our high quality steel target systems! We are pleased to offer you our innovative targets to help further your training and shooting goals. Whether for tactical drills, scenario training, competition drills, or just fun recreation, our steel targets will help make your experience that much more enjoyable. Please read the simple yet important instructions below to ensure your experience is as safe and enjoyable as possible

Key points of your A-DAP Target System:

Assembly of our target base and single top is very simple but creates a sturdy target that is of the highest quality and safety. Please be sure that the base is set on LEVEL ground. ****NOTE: you will need to cut down one 2x4 piece of lumber to length. We cannot control the length of the wood you choose to cut, or ultimately the height you choose to make your target, but we have found that cutting the board to 4 feet long has worked very well. This is our recommended length. Always be sure the target is NOT higher than your backstop!**

What is included in the box:

You will find the following packaged in your box:

- Steel top bracket with 1/2" clevis pin & clip

- Steel round ring base with (2) wing bolts for tightening/securing 2x4 upright post.

- Target per your order. Designs and thicknesses vary based on order, image shown is for representation and may not show your actual target.

All hardware required to mount the target is included. If for some reason something is missing or out of place, please notify us immediately. See back of pamphlet for caliber limitations, also see the included safe shooting pamphlet for range safety tips

Assembly Pictures:

Have your local wood supply store cut 2x4 lumber down to 4 feet in length. Note that 2x4 lumber is an actual size of 1.5 inches by 3.5 inches. This size **MUST** be used to properly fit into the base. Apply adequate pressure by tightening the thumb screws that are already installed in the base. They are found on the back and side of the base.

Place top bracket onto the top of the 2x4 upright. The angles shown on the back of the target will already be installed on your target. All you have to do is slide the top bracket between the angles as shown, then lining up the holes, slide the clevis pin through to the other side. Be **SURE** the pin is through before letting go of the target plate.

Your target is now setup. It is important at this point to review the safety information on the back as well as our safe shooting pamphlet that is included with every target we sell.
