

Other Uses for Our Innovative Target:

The beauty of the Dueling Tree system is the simplicity and fun factor. It is extremely addicting to shoot alone, but shooting with a partner makes it that much more interesting.

- Start with 3 targets staggered on each side as shown in the image on the front of this packet.
- 2 shooters stand 10 yards minimum from the target system.
- With a countdown timer or third person, start the competition!
- The first one to get all the targets to the others side, wins!
- Simple. Addicting. Skill enhancing.

Also please take the time to check out our website as well as our other social media pages. We frequently update all of our pages to show you what we are doing as a company moving forward. We also just love shooting sports in general, so expect TONS of cool action shots of us enjoying our 2nd amendment freedoms!

Basic Target Guidelines:

-The Dueling Tree is designed and intended to be shot with pistols **ONLY**. Please note that it is not designed at this time to be used with rifles or shotgun slugs. Birdshot from a shotgun is acceptable and will not damage the target. Rifle use will damage the vertical upright.

-Our Dueling Tree is designed and built to last. Its movement helps dispel fragmentation towards the ground, and also reduced stress on the target system in general. Following safety rules will help ensure your target shooting experience is a safe and memorable one!

-Please remember to maintain a 10 yard minimum distance from the target system while shooting. This is to ensure the safest shooting situation [possible and helps the shooter stay out of the “splatter zone”.

-ALWAYS WEAR APPROVED EYE AND EAR PROTECTION WHENEVER ENJOYING SHOOTING SPORTS!

-Please read our separate safe shooting pamphlet included with this packaging. It outlines basic range safety and safe shooting practices. Please consult with trained professionals BEFORE partaking in ANY range shooting!

INSTRUCTIONS

SAFELY USING YOUR STEEL
TARGET SYSTEM

DUELING TREE TARGET SYSTEM:

Congratulations and thank you for your purchase of one of our high quality steel target systems! We are pleased to offer you our innovative targets to help further your training and shooting goals. Whether for tactical drills, scenario training, competition drills, or just fun recreation, our steel targets will help make your experience that much more enjoyable. Please read the simple yet important instructions below to ensure your experience is as safe and enjoyable as possible

Key points of your Dueling Tree System:

Assembly of our Dueling Tree is very simple and creates a sturdy and stable target system that will last for years to come when used properly. The Dueling Tree is designed to be used with pistols only, at a range of 10+ yards. The assembly process requires no tools. Some folks will find it beneficial to set up with a partner, it makes it easier to set up. However it is designed to be set up even by only a single person. Many dueling trees on the market do not come apart and are very bulky, ours is very modular. The paddles easily can be installed and removed. Once struck by a bullet, they will rotate from side to side creating a very addicting shooting game and training tool!

What is included in the box:

You will find the following packaged in your box:

- Steel angle upright support with welded gussets

- Steel round ring base with (2) wing bolts for tightening/securing 2x4 upright post.

- (6) Target paddles made from 3/8" AR500 steel.

Note that dueling tree is designed for pistols only

All hardware required to mount the target is included. If for some reason something is missing or out of place, please notify us immediately. See back of pamphlet for caliber limitations, also see the included safe shooting pamphlet for range safety tips

Assembly Pictures:

First, place the round base onto a level, flat area of ground. Then, with the help of a partner, slide the upper angle into the bottom tube as shown above. Then begin tightening the thumb screws on the side and back of the tube. You may need to rock the upright side to side while tightening the screws. Please be sure the screws are adequately tightened to ensure minimal movement of the target system.

The (6) included target paddles simply slide into the gussets on the back of the vertical upright. There is a tab on each paddle and a keyway on each gusset. Line the two up and ensure the paddle is entirely seated and rotates side to side freely before using the target system. You will chip and scratch the paint upon installation, this is to be expected, especially after the target has been shot. We also recommend using a light oil or lubricant around the paddles if the target is to be left outside for extended periods of time.
